Presents

FAA Certificated Repair Stations Focused In-Depth Training Series

Seattle, Washington

Radisson Hotel Gateway Seattle-Tacoma Airport
18118 International Blvd.
Seattle WA 98188

September 21 – 23, 2010

FAA CERTIFICATED REPAIR STATION FOCUSED IN-DEPTH TRAINING SERIES: ENHANCED UNDERSTANDING OF U.S. REGULATORY REQUIREMENTS - Managing regulatory requirements in the Repair Station/MRO environment is a difficult challenge in today's aviation industry. Meeting these requirements using a multi-informational environment can increase safety and reduce resource requirements. This new 3 day seminar is designed to demonstrate how to use multi-information sources efficiently. Guidance Information such as FAA Order 8900.1, and Advisory Circulars will be presented simultaneously with the regulatory requirements to enhance learning. The seminar will also include the new Part 21 presented as it relates to the Repair Station/MRO environment.

Presented by Aviation Professionals such as George Worley (American Airlines Ret.) and Cathy Landry of Northrop Rice Aviation and others. George will provide an increased understanding of the auditing requirements under the Coordinating Agency for Supplier Evaluation (C.A.S.E) Standards. Cathy examines the training program requirements and will explore best practices in training and structured OJT. There will be sessions on meeting EASA MIP-G requirements and will show how using FAA Order 8900.1 can assist you in meeting those requirements. Product & Parts suppliers who also provide maintenance support can benefit from the information and resource materials obtained for this seminar.

Materials provided during this seminar include all presentations and student manuals in PDF format. Quick cross-reference information for FAA to EASA and EASA to FAA regulations, FAA Order 8900.1 and hyperlink sheets that provide fast direct access to the exact order section references and other useful information related to repair station operations.

For More Info call: (281) 435-9052 or toll free 1(888)816-8872
