

*Dedicated To The Aviation Professionals
That Design, Repair, Alter, Maintain, and
Certify Aircraft and Related Products.*

February 1, 2010

Dear Aviation Professional:

You are cordially invited to attend the 3rd Annual Asian Aviation Maintenance Seminar and Conference being held in Singapore at the Grand Copthorne Waterfront Hotel at the Hotel on April 20 - 22, 2010.

This year the seminar and conference will be centered on FAA Part 145 AMO/Repair Station requirements completely. Regulatory issues will be discussed from the context of repair station operational requirements. Our new format will allow FAA Order 8900.1 (FSIMS) and advisory circular guidance to be simultaneously presented during the regulatory discussions. This will allow us to cover in-depth Part 145 operational requirements over 3 days as never before. The coverage will include other applicable regulatory requirements and forms as related to a repair station and will be intermixed throughout these discussions.

George Worley (American Airlines Retired) will discuss what is involved in properly providing MRO's and repair station services to a Part 121 or Part 135 Air Carrier. This will include information on the A1 standards requirements of C.A.S.E. Having a precise understanding of these additional non regulatory requirements that air carriers look for to comply with C.A.S.E. will be helpful. He will also provide information on the air carrier Continuing Analysis and Surveillance System (CASS) and what repair stations need to know when contracting to an air carrier. George served as chairman of C.A.S.E. for 10 years.

Cathy Landry from Northrop Rice will provide the latest information on repair station training, TNA's, and structured OJT training. Cathy's has an extensive background in aviation maintenance training and is a certified Stamina human factors and Safety Management Systems trainer. Ms. Landry assisted Northrop Rice in the set-up, certification and operation of their numerous domestic aviation maintenance training schools. She also served as a project manager overseeing the curriculum development, equipment acquisition, instructor training and program development for a 1000 student training program developed for the Government of Malaysia. She has a Bachelor of Science degree and is a Certified Professional in Learning Performance (CPLP) through the American Society of Training and Development.

We will discuss how the newly revised 14 CFR Part 21 impacts the MRO industry and what changes affect other regulatory requirements including Part 145 and Part 43.

The Brochure, Application form, and Agenda are on our website: www.airworthinessstandards.com. On the homepage in the center (you may need to scroll down) "SINGAPORE" section there is a link for each of the above mentioned pages to download.

We look forward to seeing you in Singapore

Sincerely

A handwritten signature in blue ink, appearing to read "George N. Tilton".

George N. Tilton
Executive Director
